

INDEX TABLES.

To lighten the exacting and tedious work of calculating the indices, we now have a number of printed "Tables." The best of these are those of Carl M. Fürst (*Index-Tabellen; 4°, Jena, 1902*); but even these are not sufficient for all occasions and much work has to be done by each student himself. When a large number of indices are to be calculated for which no ready-made tables can be found, it pays to make such tables.
